Showroom Hours - Mon thru Fri - 9am - 5pm

## Quality Cedar Shutters

**CEDAR** is the wood of choice when it comes to exterior shutters. It resists the effects of outside exposure better than other types of wood. Paint or other finish should be applied equally to both sides. Shutters are paint grade and appropriate for oil or water based paints and solid stains.

**PAINTING SERVICE:** Have your shutters delivered fully finished! Choose a national brand and color latex paint/solid stain or send a chip. Painting service includes **1 prime coat, light sanding, 2 finish coats, a clear silicone based sealer** (applied to top edge), and **all materials**.

**PRIME ONLY:** Save time by having us prime. We use a high quality primer compatible with both latex and oil alkyd finishes. Specify **white primer** (for light finishes) or **gray primer** (for dark finishes).

## Measuring & Pricing

**MEASURING** - Shutters typically fill the opening inside the window casing where a storm or screen would fit.  
**DECORATIVE** - If shutters are decorative (even if hinged), order the closest whole inch width, dropping fractions.  
**FUNCTIONAL** - If shutters are actually going to be closed, we will trim to your exact measurements - no charge.  
**PRICING** - Price shutters using the widths listed across and the actual height inside your window opening.  
**OPTIONS** - See back of order form for pricing on arches, curve tops, special rails, priming & painting, and more.

### QUALITY MORTISE & TENON CONSTRUCTION

Yoke pins on louvers and tilt rods are dip galvanized to assure long life. These authentic wood shutters are appropriate for restoring vintage homes, public buildings or dressing up newly constructed houses. Install with functional hinges and holdbacks to achieve the true beauty of real wood shutters.

### Measuring for exterior shutters...

Shutters were the first storm windows & many were hinged to fill the same opening as a storm window or screen. Although shutters today are often used for decorative purposes, they look best when sized correctly for the opening. If using functionally, measure the area to fill or cover with two shutters. Wide openings and side by side windows may use bifolding shutters functionally, or just one shutter to mimic the bifold size for decorative purposes.

**BEFORE SHUTTERS**

**AFTER SHUTTERS**

### NO!

These plastic shutters make the house look worse instead of better. They are the wrong size and mounted in the wrong location.

### YES!

These real wood shutters are sized & shaped correctly, mounted on traditional lift-off hinges with decorative "S" holdbacks.

ALUMINUM CAPPING

COPPER CAPPING

LEAD COPPER CAPPING

Shutters can be made with 1/4 circle arch, small curve radius, or even a chamfered angle to accommodate rooflines or obstacles.

## Measuring for exterior shutters... (basic guidelines)

Shutters were the first storm windows and many were hinged to fill the same opening as a storm or screen. Although shutters are often hung today for decorative purposes, they look best when sized correctly for the opening. Please note that applications can vary. If you are reusing some original hardware, consider the original location of the closed shutters when confirming your final shutter sizes.

Some common choices for double windows or wide openings...
