Quality Cedar Shutters

CEDAR is the wood of choice when it comes to exterior shutters. It resists the effects of outside exposure better than other types of wood. Paint or other finish should be applied equally to both sides. Shutters are paint grade and appropriate for oil or water based paints and solid stains.

PAINTING SERVICE: Have your shutters delivered fully finished! Choose a national brand and color latex paint/solid stain or send a chip. Painting service includes **1 prime coat, light sanding, 2 finish coats, a clear silicone based sealer** (applied to top edge), and **all materials.**

PRIME ONLY: Save time by having us prime. We use a high quality primer compatible with both latex and oil alkyd finishes. Specify **white primer** (for light finishes) or **gray primer** (for dark finishes).

Measuring & Pricing

MEASURING - Shutters typically fill the opening inside the window casing where a storm or screen would fit.

DECORATIVE - If shutters are decorative (even if hinged), order the closest whole inch width, dropping fractions.

FUNCTIONAL - If shutters are actually going to be closed, we will trim to your exact measurements - no charge.

PRICING - Price shutters using the widths listed across and the actual height inside your window opening.

OPTIONS - See back of order form for pricing on arches, curve tops, special rails, priming & painting, and more.

Yoke pins on louvers and tilt rods are dip galvanized to assure long life. Joints are reinforced with dowels and long, concealed stainless steel wood screws. These authentic wood shutters are appropriate for restoring vintage homes, public buildings or dressing up newly constructed houses. They may be installed with functional hinges and holds or permanently fastened to achieve a touch of elegance.

Measuring for exterior shutters...

Shutters were the first storm windows & many were hinged to fill the same opening as a storm window or screen. Although shutters today are often used for decorative purposes, they look best when sized correctly for the opening. If using functionally, measure the area to fill or cover with two shutters. Wide openings and side by side windows may use bifolding shutters functionally, or just one shutter to mimic the bifold size for decorative purposes.

BEFORE SHUTTERS

AFTER SHUTTERS

NO!

These plastic shutters make the house look worse instead of better. They are the wrong size and mounted in the wrong location.

YES!

These real wood shutters are sized & shaped correctly, mounted on traditional lift-off hinges with decorative "S" holdbacks.

ALUMINUM CAPPING

COPPER CAPPING

LEAD COPPER CAPPING

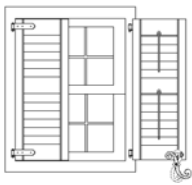

Shutters can be made with 1/4 circle arch, small curve radius, or even a chamfered angle to accommodate rooflines or obstacles.
